Could not connect to handset. Details: OBEX (Browsing files)

Glossary

SIM (Subscriber Identity Module) - Essentially a small computer on a card that sits within the mobile phone and controls various functions of call making. It also has enough memory to hold information such as ADN and SMS.

PLMN (Public-Land-Mobile-Network) - A Public-Land-Mobile-Network (PLMN) area is the geographical area in which a particular PLMN operator provides land mobile communication services to the public. From any position within a PLMN area, the mobile user can set up calls to another user of the same network, or to a user of another network. The other network may be a fixed network, another GSM PLMN, or another type of PLMN. Other network users, and users of other networks, can also call a mobile user who is active in the PLMN area. When there are several PLMN operators, the geographical areas covered by their networks may overlap. National borders normally limit the extent of a PLMN area.

LAI (Location Area Identity) A code that identifies the location area in a PLMN. The LAI code has three components: MCC-MNC-LAC.

MCC (Mobile Country Code) - The MCC is a 3-digit code that uniquely identifies the country of domicile of the mobile subscriber (for example, Germany is 262, and Brunei is 528).

MNC (Mobile Network Code) - The MNC is a 2-digit code that identifies the home GSM PLMN of the mobile subscriber. If more than one GSM PLMN exist in a country, a

unique MNC is assigned to each of them. The government of each country assigns it.

LAC (Location Area Code) - The LAC component identifies a location area within a PLMN; it has a fixed length of 2 octets and can be coded using hexadecimal representation. An operator assigns it.

ADN (Abbreviated Dialing Numbers) - more commonly known as the phonebook or contacts.

SMS (Short Message Service) – SMS is a form of textual conversation permitted by a network carrier. The service allows a user to send and receive textual messages direct to their handsets. The storage capacity depends on the handset and SIM. The date and time of received messages is generated by the network, all other date and time stamps are generated from the handset time. The maximum character length is 160 per SMS. Some handsets allow longer messages to be compiled and therefore are split into relevant parts when sent, these messages are known as concatenated.

Deleted SMS (Short Message Service) - These are text messages that have been deleted from the SIM card by the cellphone user. However, most mobile phones do not remove the message, but mark the message to be overwritten by incoming messages from the network.

MMS (Multimedia Messaging Service) – A service which allows Multimedia messages to be sent from one mobile to another via one or more call centres or network providers. A Multimedia message is stored on the handset and can contain a combination of text, video clips, images and sound clips.

ICCID (Integrated Circuit Card Identifier) - The serial number of the SIM card stored electronically within the SIM. A similar number or shortened version is often found printed on the SIM card.

IMEI (International Mobile Equipment Identifier) - This is a unique number given to each handset. This is usually printed somewhere on the handset, (typically in the battery compartment) and stored electronically in the phone handset memory. It can be viewed typing **#06#* on the keypad.

PIN (Personal Identification Number) - The SIM card has been locked against unauthorized access using the PIN number. When PIN security is activated, the correct PIN number must be entered in order to use any of the features of the handset (make calls, access ADN etc.) The only calls that can be made without a PIN are calls to the emergency services.

PUK (Personnel Unblocking Key) - If the PIN is unknown the PUK is used to unblock the SIM card and enable a new PIN code to be entered.

MSISDN (Mobile Station ISDN Number) - This number is the standard international number used to identify a given subscriber. However, the number stored in the MSISDN location on a SIM Card can be changed without affecting the actual telephone number. Therefore, the MSISDN number downloaded from the SIM card can only be used as an indicator.

IMSI (International Mobile Subscriber Identity) - This is a unique number allocated to each mobile phone subscriber, stored electronically within the SIM Card. It is used by the network to look up the telephone number associated to the SIM Card.

GSM (Global Mobile System) - a digital mobile telephone system that is widely used in Europe and other parts of the world. GSM uses a variation of time division multiple access (TDMA) and is the most widely used of the three digital wireless telephone technologies (TDMA, GSM, and CDMA).

CDMA (Code Division Multiple Access) - refers to any of several protocols used in so-called second-generation (2G) and third-generation (3G) wireless communications. As the term implies, CDMA is a form of multiplexing, which allows numerous signals to occupy a single transmission channel, optimizing the use of available bandwidth. The technology is used in ultra-high-frequency (UHF) cellular telephone systems in the 800-MHz and 1.9-GHz bands.

TDMA (Time Division Multiple Access) - is a technology used in digital cellular telephone communication that divides each cellular channel into three time slots in order to increase the amount of data that can be carried.
